Amendments to the Claims:

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of Claims:

Ĺ

1. (currently amended) A method of cloaking <u>an</u> encrypted <u>serial</u> data <u>stream</u>, comprising:

encapsulating a serial data stream of encrypted data into IP packets; and

transmitting said IP packets of encrypted <u>serial</u> data on a public IP network.

2. (currently amended) The method of cloaking <u>an</u> encrypted <u>serial</u> data <u>stream</u> according to claim 1, wherein:

said public network is an Internet.

3. (currently amended) The method of cloaking <u>an</u> encrypted <u>serial</u> data <u>stream</u> according to claim 1, wherein:

said IP packets are transmitted via an ISDN router.

4. (currently amended) The method of cloaking <u>an</u> encrypted <u>serial</u> data <u>stream</u> according to claim 1, wherein:

said IP packets are transmitted over a satellite terminal.

5. (currently amended) The method of cloaking <u>an</u> encrypted <u>serial</u> data <u>stream</u> according to claim 1, further comprising:

encrypting data using a Type 1 encryption unit.

6. (currently amended) The method of cloaking <u>an</u> encrypted <u>serial</u> data <u>stream</u> according to claim 5, wherein said Type 1 encryption unit comprises:

a KIV type encryption unit.

7. (currently amended) The method of cloaking <u>an</u> encrypted <u>serial</u> data <u>stream</u> according to claim 6, wherein said Type 1 KIV-type encryption unit comprises:

a KIV-7 encryption unit.

8. (currently amended) The method of cloaking <u>an</u> encrypted <u>serial</u> data <u>stream</u> according to claim 1, wherein said serial data stream of encrypted data comprises:

Voice over IP (VoIP) data.

9. (currently amended) The method of cloaking <u>an</u> encrypted <u>serial</u> data <u>stream</u> according to claim 1, wherein:

said serial data stream is a synchronous serial data stream.

10. (currently amended) The method of cloaking <u>an</u> encrypted <u>serial</u> data <u>stream</u> according to claim 9, wherein:

said synchronous serial data stream is an RS-530 data stream.

11. (currently amended) The method of cloaking <u>an</u> encrypted <u>serial</u> data <u>stream</u> according to claim 1, further comprising:

combining data from two voice sources into said serial data stream before said encapsulation.

12. (currently amended) Apparatus for cloaking <u>an</u> encrypted <u>serial</u> data <u>stream</u> in a deployable, secure communication terminal, comprising:

means for encapsulating a serial data stream of encrypted data into IP packets; and

means for transmitting said IP packets of encrypted <u>serial</u> data on a public IP network.

13. (currently amended) The apparatus for cloaking <u>an</u> encrypted <u>serial</u> data <u>stream</u> in a deployable, secure communication terminal according to claim 12, wherein:

said public network is an Internet.

14. (currently amended) The apparatus for cloaking <u>an</u> encrypted <u>serial</u> data <u>stream</u> in a deployable, secure communication terminal according to claim 12, wherein:

said IP packets are transmitted via an ISDN router.

15. (currently amended) The apparatus for cloaking <u>an</u> encrypted <u>serial</u> data <u>stream</u> in a deployable, secure communication terminal according to claim 12, wherein:

said IP packets are transmitted over a satellite terminal.

16. (currently amended) The apparatus for cloaking <u>an</u> encrypted <u>serial</u> data <u>stream</u> in a deployable, secure communication terminal according to claim 12, further comprising:

means for encrypting data using a Type 1 encryption unit.

17. (currently amended) The apparatus for cloaking <u>an</u> encrypted <u>serial</u> data <u>stream</u> in a deployable, secure communication terminal according to claim 16, wherein said Type 1 encryption unit comprises:

a KIV type encryption unit.

18. (currently amended) The apparatus for cloaking <u>an</u> encrypted <u>serial</u> data <u>stream</u> in a deployable, secure communication terminal according to claim 17, wherein said Type 1 KIV-type encryption unit comprises:

a KIV-7 encryption unit.

19. (currently amended) The apparatus for cloaking <u>an</u> encrypted <u>serial</u> data <u>stream</u> in a deployable, secure communication terminal according to claim 12, wherein said serial data stream of encrypted data comprises:

Voice over IP (VoIP) data.

20. (currently amended) The apparatus for cloaking <u>an</u> encrypted <u>serial</u> data <u>stream</u> in a deployable, secure communication terminal according to claim 12, wherein:

said serial data stream is a synchronous serial data stream.

21. (currently amended) The apparatus for cloaking <u>an</u> encrypted <u>serial</u> data <u>stream</u> in a deployable, secure communication terminal according to claim 20, wherein:

said synchronous serial data stream is an RS-530 data stream.

22. (currently amended) The apparatus for cloaking <u>an</u> encrypted <u>serial</u> data <u>stream</u> in a deployable, secure communication terminal according to claim 12, further comprising:

means for combining data from two voice sources into said serial data stream before said means for encapsulating encapsulates said serial data stream.

23. (currently amended) The apparatus for cloaking <u>an</u> encrypted <u>serial</u> data <u>stream</u> in a deployable, secure communication terminal according to claim 22, wherein said means for combining data from two voice sources comprises:

a voice-enabled router.

24. (currently amended) A secure communications device, comprising:

means for encrypting a data stream into an encrypted <u>serial</u> data stream;

means for encapsulating said encrypted <u>serial</u> data stream for transmission to another secure communications device using IP protocol; and means for routing said encapsulated, encrypted <u>serial</u> data stream over an Internet.

25. (currently amended) The secure communications device according to claim 24, wherein said means for routing comprises:

an Ethernet to ISDN router.

26. (currently amended) The secure communications device according to claim 24, wherein said means for encrypting comprises:

A KIV-7 encryption unit.

27. (currently amended) The secure communications device according to claim 24, wherein:

said means for encapsulating converts a RS-530 synchronous serial data stream into an IP data stream.
